

ADITHYA VADDADI

Hyderabad, India

adithyaadi104@gmail.com | +91-7075615349 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Artificial Intelligence and Machine Learning student with hands-on experience in Python-based machine learning workflows including data preprocessing, feature engineering, model training, and evaluation using Pandas and Scikit-learn. Experienced in developing AI systems involving computer vision and retrieval-augmented generation (RAG) pipelines.

EDUCATION

Bachelor of Technology in Artificial Intelligence and Machine Learning

May 2027

Sphoorthy Engineering College, Hyderabad

CGPA: 7.4 / 10

Relevant Coursework: Machine Learning, Artificial Intelligence, Database Management Systems, Data Structures

EXPERIENCE

Machine Learning Intern

Dec 2025 – Feb 2026

Infosys Springboard (Remote)

- Built and evaluated supervised learning models on structured datasets using Python and Scikit-learn.
- Applied data preprocessing and feature engineering techniques to improve model performance.
- Collaborated with peers on machine learning workflows and participated in code reviews.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL

Machine Learning: Supervised Learning, Classification, Regression, Model Training, Feature Engineering, Model Evaluation

Data Science Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Deep Learning: TensorFlow, Keras

Tools: Git, GitHub, Jupyter Notebook, Google Colab

PROJECTS

ClauseAI: Automated Legal Contract Analysis Tool

GitHub

Technologies: Python, LangGraph, Pinecone, NLP

- Developed a multi-agent AI system using LangGraph to analyze legal contracts and coordinate agents for clause extraction, risk identification, and compliance validation.
- Implemented a retrieval-augmented generation (RAG) pipeline storing embeddings in Pinecone vector database for semantic document search.
- Built an NLP-based document processing pipeline supporting multiple file formats with automated report generation.

Food Classification Using Deep Learning

GitHub

Technologies: Python, TensorFlow, MobileNetV2, Computer Vision

- Built an image classification model using TensorFlow and MobileNetV2 transfer learning.
- Achieved 87% validation accuracy through image augmentation and hyperparameter tuning.
- Implemented preprocessing techniques including rotation, flipping, and zoom augmentation to improve model generalization.

CERTIFICATIONS

IBM — Introduction to Artificial Intelligence (Coursera)

Hands-On Machine Learning Workshop

HackerRank — Python (Basic), Java (Basic)
